## PRESENTACIÓN

El mercado automotor nacional al cierre del año 2013 registró una reducción del 6% en comparación con el año 2012 y del 18% con relación al año 2011.

Factores como la restricción de importaciones, la Ley para la Regulación de Créditos de Vivienda y Vehículos y la desaceleración de la economía nacional han incidido en la reducción de las ventas del mercado automotor en el año 2013.

La restricción de importaciones aplicada a través de sus distintos mecanismos (registro de importadores, licencias de importación y restricción cuantitativa) ha limitado la capacidad de oferta de las empresas del sector desde el año 2010 y se extenderá hasta el 31 de diciembre del 2014.

Un factor adicional que puede afectar de manera negativa al mercado nacional, es la iniciativa del gobierno de incrementar el equipamiento de seguridad de los vehículos. En todo sentido esta iniciativa es loable y el sector automotor apoya irrestrictamente el proyecto “Vehículos más seguros” sin embargo es importante considerar la estructura impositiva actual que soportan los vehículos y la cual denota un contrasentido frente al objetivo de vehículos más seguros.

La inclusión de elementos de seguridad como frenos antibloqueo abs, sistema electrónico de control de estabilidad ESC, protección para impactos frontales y laterales, anclajes ISOFIX, entre otros que supondrían un incremento aproximado en los precios de los vehículos de gama económica de entre USD 2.000 y USD 5.000, haciendo inviable cumplir el objetivo de vehículos más seguros ya que con la exigencia obligatoriamente se deberían importar vehículos más equipados, a los que no van a poder acceder los usuarios de nivel socio económico medio y medio bajo por lo que el beneficio final difícilmente se podrá reflejar en el mercado si los usuarios no pueden adquirir los vehículos más seguros.

La iniciativa gubernamental plantea un nuevo reto de trabajo conjunto entre el gobierno y sector automotor para aplicar de forma efectiva la

iniciativa de vehículos más seguros sin impedir el acceso de la población a estos vehículos.

El afán de esta publicación es ofrecer una referencia del valor de mercado de los vehículos usados considerando los factores que han influido en los precios de venta.

### **¿Cómo se calcula el Impuesto Verde?**

Este impuesto en su cálculo considera dos variables: el cilindraje del vehículo (solo si es mayor a 1.500cc) y su antigüedad.

El Impuesto Verde se calcula con la siguiente fórmula:

$$\text{IMP VERDE} = (\text{Cilindraje del vehículo} - 1.500) \times \text{tarifa por cc según el cilindraje del vehículo (TABLA 1)} \times (1 + \text{factor de antigüedad})$$
  
(Tabla 2)

Ejemplo

¿Qué valor tendría que pagar por concepto del Impuesto Verde una Luv diesel 2.8L D/C 4x4 del año 2004?

Cilindraje = 2.800 cc

Antigüedad = (2011 - 2004) 7 años

$$\text{IMP VERDE} = (2.800 - 1.500) \times (0.11) \times (1 + 0.05) = 150,15 \text{ dólares}$$

TABLA 1 Cilindraje

No.	Tramo de cilindraje	Tarifa por cc. (A)
1.	menor a 1.500 cc.	0.00
2.	1.501 - 2.000 cc.	0.08
3.	2.001 - 2.500 cc.	0.09
4.	2.501 - 3.000 cc.	0.11
5.	3.001 - 3.500 cc.	0.12
6.	3.501 - 4000 cc.	0.24
7.	Más de 4.000 cc.	0.35

TABLA 2 Antigüedad

No.	Tramo de Antigüedad (años)	Factor (B)
1.	menor a 5 años	0%
2.	mayor de 5 a 10 años	5%
3.	mayor de 10 a 15 años	10%
4.	mayor de 15 a 20 años	15%
5.	mayor a 20 años	20%
6.	Híbridos	-20%

## **OBLIGACIÓN DE REPORTES A UNIDAD DE ANÁLISIS FINANCIERO**

En Registro Oficial No. 542 del 26 de septiembre de 2011 se publicó la Resolución UAF-DG-2011-0052 de la Unidad de Análisis Financiero del Consejo Nacional Contra el Lavado de Activos que obliga a todas las empresas comercializadoras de vehículos (nuevos y usados) a elaborar y enviar mensualmente varios reportes que se detallan en la resolución.

Entre los reportes a enviar está el de las transacciones de US\$ 10.000 o más, con lo cual todas las ventas de vehículos deberán ser reportadas.

Previamente en el plazo de 60 días se deberá enviar una solicitud para la obtención de un Código de Registro para Reportes con los requisitos de la Resolución No. UIF-DG-2010-0090.

Adicionalmente se deberá asignar el desempeño del cargo de “Oficial de Cumplimiento” a un funcionario de la empresa quien deberá ser acreditado por la Unidad de Análisis Financiero previo el cumplimiento de varios requisitos en el plazo de 90 días.

En el pasado estaban sujetas a estas obligaciones únicamente las instituciones del sistema financiero, pero ahora se las ha ampliado a empresas de varios otros ámbitos por lo que es importante que todos los comercializadores cumplan con esta obligación, ya que de acuerdo al Art. 19 de la Ley de Prevención, Detección y Erradicación del Delito de Lavado de Activos, su incumplimiento será sancionado con multas de US\$ 500 a US\$ 20.000

Mayor información se podrá encontrar en la página web:  
[www.uif.gov.ec](http://www.uif.gov.ec)

## ¿CÓMO FUNCIONA LA GUÍA?

Conjuntamente con la incorporación de nuevos modelos, que semestre a semestre recoge la Guía Nacional del Mercado de Vehículos Usados: Livianos y Pesados, continuamos con el sistema racional de nomenclatura para la identificación de aproximadamente 11.000 vehículos que ahora tiene nuestro informe y que se basa en el siguiente esquema para vehículos livianos

**1.- Marca del vehículo:** fácilmente reconocible por el tamaño de letra y el sombreado, donde se ubica la fecha en que se recogió la información de los precios de venta al público (PVP) y su fuente.

**2.- Año de fabricación:** ubicado en el costado izquierdo

**3.- Identificación del vehículo:** de acuerdo a los siguientes parámetros:

a) Modelo del vehículo según el fabricante

b) Cilindrada en litros (L) que puede transformarse en centímetros cúbicos a razón de 1L por 1000cm<sup>3</sup>

c) Tipo de combustible utilizado, siempre y cuando no sea gasolina, es decir diesel, descrito como DIE, en la mayoría de los casos, o según los sistemas de inyección diesel que prevalezcan como TDI (ejemplo AUDI, SKODA y VW), CRDi (Hyundai y Kia), CRD y TD (Mazda), DID (Mitsubishi), CRTi (Nissan), etc.

d) Tipo de vehículo:

- 2p (coupe),
- 2p+1 (coupe con 1 puerta en costado izquierdo y 2 en derecho)
- 3p (coupe con portezuela posterior),
- 4p (sedan),
- 5p (hatchback, 4 puertas laterales más portezuela posterior),
- SW (station wagon) camioneta cerrada derivada de un sedan
- SUV (todo terreno de 5 puertas) pudiendo ser 4x2 o 4x4
- SUV 3p (todo terreno de 3 puertas) pudiendo ser 4x2 o 4x4
- P/U (camioneta de balde) pudiendo ser C/S (cabina simple), C/S

sin balde (cabina simple sin balde o cajón), S/C (Super Cab o cabina extendida de puertas encontradas), CM (cabina mediana de puertas encontradas) o D/C (doble cabina). En todos los casos en versiones 4x2 y 4x4

- van (mini furgoneta o furgoneta de pasajeros –px- o de carga)

e) Tipo de caja de cambios en los casos que no sea la convencional manual (T/M) o se preste a confusión y que por tanto use: Automática o Secuencial, S Tronic, Tiptronic, Multitronic, Steptronic, H Matic, Activematic y DSG.

f) Cualquier otra característica que resulte importante para la correcta identificación del vehículo y cuyas siglas constan en el cuadro de abreviaturas.

**4.- Precio de mercado (P.M.):** es el valor máximo sugerido que el comprador de un vehículo podría pagar por él dependiendo de las condiciones normales de apariencia, uso, lugar de origen de la placa y zona geográfica donde se encuentra. En caso de consignación la comisión podría fluctuar entre 3% y 5% del precio de mercado, dependiendo del grado de demanda del vehículo.

**5.- Precio de toma (P.T.):** es el valor sugerido en que podría ser recibido en parte de pago un vehículo o comprado para su posterior comercialización, dependiendo también de las condiciones normales de apariencia, uso, lugar de origen de la placa y zona geográfica de donde proviene.

La diferencia entre el precio de mercado y el precio de toma es el margen sugerido de comercialización. La Guía propone tres niveles, según el grado de demanda del vehículo: a mayor demanda, menor margen y a menor demanda, mayor margen.

Siguiendo el mismo esquema anterior, continúa la nueva forma para reconocer a los casi 2.500 vehículos pesados y semi-pesados que tiene esta décima primera edición y que a no dudarlo, incidirá positivamente en su rápida identificación, por ello les invitamos a revisar su nomenclatura.

Todo modelo de vehículo pesado o semi pesado está descrito de la siguiente forma:

**1.- Marca del vehículo:** fácilmente reconocible por el tamaño de letra y el sombreado, donde se ubica la fecha en que se recogió la información de los PVP y su fuente.

**2.- Año de fabricación:** ubicado en el costado izquierdo

**3.- Identificación del vehículo:** de acuerdo a los siguientes parámetros:

a) Modelo o nombre del vehículo según el fabricante

b) Tipo de vehículo pesado: se reconocen con las abreviaturas de  
- CA: camión (vehículo de un solo eje posterior con doble llanta) Sólo ciertos modelos de 2 toneladas de capacidad de carga, poseen un par de neumáticos en el eje posterior. Ejemplo: Chevrolet NHR, Daihatsu Delta, Kia K2700

- MU: mula (vehículo de doble eje posterior con doble llanta)

- TR: tracto (vehículo de arrastre con uno -4x2- o dos -6x4- ejes posteriores, con doble llanta y corta distancia entre ejes respecto al camión o a la mula)

- BT: Bus Tipo de servicio urbano con asientos fijos y capacidad hasta para 90 pasajeros, entre sentados y parados, fabricado en carrocería nacional (CN) o carrocería importada (CI). Su capacidad de carga máxima es de 7 toneladas

- BI: Bus interprovincial con asientos reclinables y capacidad hasta 45 pasajeros sentados, fabricado en carrocería nacional (CN) o carrocería importada (CI). Nótese que si bien pueden llevar hasta 7 toneladas, lo que significa 90 pasajeros, solo se permite 45 y sentados.

- TOR: Chasis torpeda, que se vende para la colocación de una carrocería de bus con capacidad máxima para 7 toneladas (45-90px)

- MB: Microbus con capacidad entre 25 a 32 pasajeros, puede ser escolar (asientos fijos) y de turismo (asientos reclinables) fabricado en carrocería nacional (CN) o carrocería importada (CI)

- FURGO: Furgoneta o minivan con capacidad para más de 9 y hasta 19 pasajeros sentados

- MIX: Mezcladora u hormigonera equipada
- RB: Recolector de basura importado
- VQ: Volqueta con diferentes capacidades: 6, 8, 10, 12 y hasta 14 metros cúbicos de capacidad de tolva.

c) Motor: dependiendo del espacio y disponibilidad, aparece información sobre el nombre de la máquina; su cilindrada en litros (L); el número de cilindros; y la potencia máxima del motor.

d) Algún otro dato que identifique al vehículo como chasis cabinado, chasis de volqueta, peso bruto vehicular, etc.

e) La capacidad efectiva de carga expresada en:

- toneladas (TN), para camiones, mulas y torpedos;
- toneladas de arrastre (TNA), para tractos;
- número de pasajeros (px) para buses o furgonetas;
- volumen de carga en las volquetas calculada en metros cúbicos (m<sup>3</sup>); y
- capacidad de mezcladoras y recolectores de basura expresadas en metros cúbicos y hasta yardas cúbicas.

Estas cinco clases de datos aparecen en cada modelo, exceptuando en ciertos vehículos que por su edad y dificultad de identificación, solo permiten expresar lo más importante.

**4.- Precio de mercado (P.M.):** con idéntica definición que en el caso de los vehículos livianos.

**5.- Precio de toma (P.T.):** con idéntica definición que en el caso de los vehículos livianos.

## SEIS PASOS HACIA EL AUTO CORRECTO

¿Cuál es el vehículo adecuado para mí? ¿Cómo puedo ahorrar dinero y hacer un buen negocio? Hemos creado esta sección para ayudarle a responder estas preguntas y guiarle a través de este proceso. Los siguientes pasos le ayudarán a tomar su decisión respecto del precio, tipo, estado y otros aspectos importantes del vehículo que está buscando:

### 1. ¿Qué tipo de vehículo necesita?

Si analiza sus necesidades, rápidamente descubrirá qué vehículo es el mejor para usted. Tómese un momento para pensar con qué fines usa su auto. ¿A cuántas personas necesita transportar? ¿Qué clase de manejo realiza con mayor frecuencia? ¿Cuán largo es su viaje al trabajo?, además de un consumo razonable de combustible.

En muchos casos, la gente escoge un vehículo por su llamativo modelo o porque está de moda. Si usted va en esta dirección, bien podría sobrepasar su presupuesto o sentirse inconforme al poco tiempo. Deje que sus necesidades, más no sus deseos, guíen su decisión.

Aquí están otras preguntas para tener en mente cuando empiece el proceso de comprar un auto:

- ¿Quiere transmisión manual o automática?
- ¿Necesita realmente un 4x4?
- ¿Qué características de seguridad desea?
- ¿Requiere una gran capacidad de carga? ¿Va a hacer trabajos de remolque?
- ¿El auto cabe en su garaje o área de parqueo?

### 2. ¿Cuánto puede pagar?

Establecer un valor real mensual que se acomode a su presupuesto es un primer paso crucial. ¿De cuánto debería ser éste?

Una regla importante es que el total de los pagos mensuales del auto, ya sea que posea uno o más de uno, no debería exceder del 20% de sus ingresos mensuales. Tómese el tiempo para hacer números ahora, antes de que vaya a comprar un auto. Esto no

solo le mostrará cuánto puede pagar, sino también le ayudará a controlar las cifras cuando esté negociando con el vendedor.

**3. ¿Dentro del tipo de vehículo que necesita, ha considerado a todas las marcas?**

La oferta de vehículos en nuestro país es bastante grande y con excelentes productos. Usted puede visitar páginas webs para estar al tanto de las características técnicas y especificaciones de los vehículos, antes de visitar los patios de autos o al vendedor.

**4. ¿Ha considerado todos los costos sobre la propiedad?**

Aquí hay un hecho que a menudo se puede pasar por alto: comprar un automotor podría ser barato, pero más caro tenerlo. ¿Por qué? Incluso si dos vehículos cuestan casi lo mismo, un auto puede depreciarse a un rango diferente, o puede tener un valor más alto para asegurarlo o mantenerlo. Antes de que usted compre un vehículo, debería estimar los costos a largo plazo de tener el automóvil que está considerando. Esto incluye depreciación, seguro, mantenimiento y rendimiento de combustible. Si usted considera estos datos para tomar una decisión inteligente, habrá ahorrado algunos dólares, que le podrán servir para la compra del siguiente.

**5. ¿Cómo probar el automotor?**

El objetivo de la prueba de manejo es experimentar, lo más cerca posible, el mismo tipo de condiciones de manejo en las que será usado el vehículo. Encienda y apague el auto varias veces, conduzca el vehículo a diferentes velocidades, deténgase y adéntrese en el tráfico o en la autopista. Si usted frecuentemente va hacia las montañas o maneja en la sierra, trate de encontrar algún terreno similar. Pase sobre huecos en la calle, realice varios giros y pruebe los frenos en un lugar seguro. Entre y salga del vehículo varias veces y asegúrese de sentarse en el asiento posterior, especialmente si planea llevar pasajeros. Mientras usted está evaluando el auto no se distraiga por el vendedor. No maneje con el radio encendido, eso puede evaluarlo después. Un automóvil es una gran inversión, asegúrese de que está empleando el tiempo suficiente para conocerlo. Entonces, considere una última cosa:

su intuición. Si usted está indeciso con este vehículo, siga sus instintos. La decisión de comprar un auto es muy importante y costosa como para emprenderla sin total confianza.

#### **6. Alistándose para la compra**

En este punto usted debe haber considerado todos los autos del tipo en el que está interesado. Debe tener una buena idea sobre lo que puede pagar y además haber probado sus opciones favoritas. Ahora es tiempo de reducir sus opciones a un vehículo y hacer el negocio.

## **AJUSTES DE PRECIO POR ESTADO, KILOMETRAJE Y REGIÓN**

Independientemente del estado mecánico que presente el vehículo a valorar y que solo puede ser evaluado por un técnico de confianza del comprador, está la apariencia del automotor. Por apariencia se entiende el estado de la pintura, cuyo costo de reposición total está entre \$500 a \$1 000, dependiendo del tamaño del vehículo y el tipo de pintura. Por apariencia se comprende que todos los faros, molduras, lunas, cristales, retrovisores, logos, manillas, tapacubos, neumático de repuesto, ruedas, etc., se encuentren en buenas condiciones de acuerdo al año.

Las posibles colisiones que haya sufrido un automotor se comprueban cuando al examinar a ras de ojo las superficies metálicas, éstas muestran ondulaciones; cuando los marcos de las puertas evidencian haber sido pintados o se nota que hay fricción de partes metálicas; cuando las puertas tienen un sonido extraño al cerrar o abrir; cuando los cauchos que garantizan hermeticidad presentan roturas o desgaste excesivo; al comprobar que pernos o remaches están sin pintar o son diferentes entre sí; al atestiguar sueldas sin un buen acabado y cuando los espacios entre superficies móviles como capot de motor, baúl y puertas no guardan la misma distancia en todo su contorno.

La apariencia también debe ser verificada en el interior a través del estado de la tapicería, el grado de deterioro de la alfombra y área de carga, las roturas que pudiera presentar el panel de instrumentos y los paneles laterales de las puertas, así como las condiciones del tumbado. Es necesario comprobar el funcionamiento del equipo de sonido, el aire acondicionado en el caso de tener, los vidrios y retrovisores eléctricos y en general de todos los componentes eléctricos y electrónicos.

Una vez examinado todo lo anterior nos encontraremos ante tres realidades: a) que se cumpla con la mayoría de los puntos abordados, en cuyo caso el precio a pagar coincidiría con el precio de mercado; b) que el vehículo exceda el estado normal, esto es que tanto pintura como interior presenten condiciones excelentes, entonces el precio

podría subir entre 33 al 66% de la diferencia con respecto al modelo del siguiente año.

La segunda variable para discriminar un valor es el kilometraje, tantas veces cuestionado por su fácil manipulación, aunque hoy con los odómetros digitales esta mala práctica se ha limitado considerablemente. Como dijimos más arriba, el kilometraje anual de un vehículo liviano oscila entre 20 a 25 000 kilómetros, a lo que podemos agregar que en vehículos de lujo, sedanes especialmente, este no suele rebasar los 15 000. Bien, si un automotor está por debajo del primer rango y su apariencia acompaña este dato, es muy seguro que se trate de un vehículo escasamente recorrido y que su precio de mercado pueda subir hasta en un 33% la diferencia que le separa con el mismo modelo del siguiente año.

En suma, lo máximo que puede llegar a costar un vehículo usado es el precio del mismo automotor normal del siguiente año.

Otra causa que puede incidir en el precio de venta de un vehículo usado es su ubicación geográfica. Los precios que mostramos en la Guía corresponden a los encontrados en Quito que además son una especie de media a nivel nacional; sin embargo, en la costa los vehículos se aprecian entre un 3 a 5% menos, contrariamente a lo que sucede en la sierra central y sur, donde los automotores cuestan 3 a 5% más que en Quito. No estamos hablando de vehículos con placas de Guayas o de cualquier provincia de la costa que se vendan en Quito, ya que esto no es una situación común.

Con estos tips obtenidos de la experiencia de cerca de 13 años en el mundo de precios de los vehículos usados, creemos poder contribuir a la transparencia de los valores de automóviles, camionetas, todo terreno, furgonetas, camiones y buses, que a continuación encontrarán, recordándoles que según dice la economía: “el precio es el valor pecuniario o monetario que expresa la proporción en que se cambia un bien” en este caso un vehículo, “por dinero”.

## ¿CÓMO SABER EL AÑO DE SU VEHÍCULO?

Uno de los datos más importantes que necesita conocer el comprador de un vehículo, usualmente usado, es el año del automotor que está adquiriendo. Para poder obtener una información fidedigna debe basarse en el número de identificación del vehículo, más conocido por sus siglas en inglés como V.I.N. (Vehicle Identification Number). Este número impreso en una pequeña placa de metal, está generalmente localizado en el lado izquierdo del salpicadero o panel de instrumentos, visible a través del parabrisas. En algunos modelos el V.I.N. está ubicado sobre el pilar izquierdo del parabrisas.

Desde 1981, el décimo dígito del V.I.N. representa el año del vehículo, para lo cual es preciso revisar la siguiente tabla

<b>Código</b>	<b>Año vehículo</b>	<b>Código</b>	<b>Año vehículo</b>
F	1985	Y	2000
G	1986	1	2001
H	1987	2	2002
J	1988	3	2003
K	1989	4	2004
L	1990	5	2005
M	1991	6	2006
N	1992	7	2007
P	1993	8	2008
R	1994	9	2009
S	1995	A	2010
T	1996	B	2011
V	1997	C	2012
W	1998	D	2013
X	1999	E	2014

(Basada en la Norma NTE INEN - ISO 3779)

## ABREVIATURAS USADAS EN LIVIANOS

1.8T	1.8 litros con turbo
4WD FT	Tracción a las 4 ruedas todo el tiempo en Skoda Yeti
4x4	Tracción a las 4 ruedas
6T/M	Caja manual de seis marchas
A/A	Aire acondicionado
AB	Air Bag, equipados con bolsa de aire
ABS	Sistema de freno anti patinaje
Ambiente	Versión Ambiente de SKODA
AWD	Tracción permanente
b recub	Balde recubierto en Mahindra desde 1/2 de 2012
B/C	Bloqueo central
BD	Bloqueo del diferencial en VW Amarok y Toyota FJ
Bluetot	Sistema Bluetooth
BP	Bajo pedido modelos de Volvo
BR	Fabricado en Brasil
BT	Biturbo en VW Amarok
C/S	Cabina simple
C1/2	Cabina y media para Dodge RAM
Cab ext	Cabina extendida T. Blazer
Cabrio	Cabriolet o convertible
CC	Coupe Cabriolet (convertible)
Cin	Cinascar
CM	Cabina Media Serie BT de Mazda
CO o COL	Ensamblado en Colombia

CRD	Tipo de motor turbo diesel
CRDi	Motor diesel con Riel Común
CRTI	Tipo de motor turbo diesel
CSP	Chevy Star Platinum
CSS	Chevy Star Silver
cue	Tapicería de cuero
Cum	Motor Cummins a diesel en DODGE
CV	Caballos de vapor
CVT	Transmisión Continuamente Variable
D	Fabricado en Alemania
D/C	Doble cabina
D/H	Dirección hidráulica
DID	Motor turbo diesel de Mitsubishi
DIE	motor a diesel
DLX	Versión de lujo
DOHC	Doble árbol de levas en cabeza
DT	Dispositivo Satelital
Dynam	Versión Dynamique de RENAULT
E/E	Espejos eléctricos
EC	Ensamblados en Ecuador
EFI	Sistema de inyección de Toyota
Eg	Versión Ego de TOYOTA
Exc	Modelo Exclusive
Express	Versión Expression de RENAULT
F	Fabricado en Francia
GLS	Versión superior a STD

Hal	Halógenos
Hdi	Motor diesel del Peugeot 206
HM	Transmisión H Matic
hp	Caballos de fuerza
HPDI	High Pressure Direct Injection en Peugeot 308 diesel
Hriel	Hiper Riel de Nissan X-Trail
HT	Hard Top capota dura en Jeep Wrangler Sport
IM	Suspensión Iron Man en la Mazda BT-50 TSX
JPN	Fabricado en Japón
JTS	Tracción integral permanente Alfa Romeo
K	Compresor en modelos Mercedes
L	Litros
Ltd	Edición Limitada
MEX	Ensamblado en México
Multit	Caja Secuencial Multitronic
N Force	New Force de Kia Sportage
N/B	Nuevo balde en Frontier NP300
N1	Nivel 1 de acabado en Citroen
N2	Nivel 2 de acabado en Citroen
neb	Neblineros
Nm	Newton-metro, medida de torque
Outd	Outdoors en BT-50 TSX de Mazda
p	Puerta
P.P.	Pintura en parachoques
P/E, PE	Paquete eléctrico
P/U	Pick Up o camioneta de cajón

Pack	Paquete de extras
Paq.	Elementos eléctricos extras en VW
Paq. Elec	Paquete eléctrico
Park	Asistencia de parqueo del Kia Sportage Active
PK	Paquete KIA
PS	Caballos de fuerza
px	Pasajeros
Qu	Quattro de AUDI
RA	Fabricado en Argentina
S/C	Super Cab o 1 1/4 de cabina
S/F	Semifull
SeR	Sensor de retro
ST	Soft Top capota de lona en Jeep Wrangler Sport
STD	Versión estandar
Stept	Caja secuencial Steptronic
Susp	Suspensión
SUV	Sport Utility Vehicle
SW	Station Wagon
T	Turbo
T/A	Transmisión Automática o Secuencial
T/C	Techo corredizo de cristal
T/M	Transmisión manual
T/P	Techo panorámico
TAI	Tailandia
TCI	motor a diesel
TD	Turbo diesel

TD4	Turbo diesel de 4 cilindros
TD5	Turbo diesel de 5 cilindros
Tipt	Caja de cambios Tiptronic
USA	Fabricado en Estados Unidos
v	Velocidades
V/E	Vidrios eléctricos
V-6 o V6	6 cilindros en "V"
V-8 o V8	8 cilindros en "V"
val	Válvulas
VEN	Ensamblado en Venezuela
Vti	Sistema variable de apertura de válvulas
VVTi	Actual sistema de inyección de Toyota
